PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years of experience specializing in building high-performance, scalable Angular applications for the Fintech and international remittance sector. Expert in the full Angular version lifecycle (v7–v15+) with deep proficiency in TypeScript, RxJS, and state management patterns. Proven track record of architecting reusable component libraries, enforcing Clean Code and SOLID principles, and mentoring developers through rigorous code reviews. Skilled in responsive design, cross-browser compatibility, and integrating RESTful APIs within complex, compliance-driven financial platforms.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3 (SCSS/SASS)

Frameworks: Angular (7–15+), RxJS, NgRx, Angular Material, Kendo UI, Bootstrap

Testing: Jasmine, Karma, Cypress, Unit & E2E Testing

Tools & DevOps: Git, CI/CD Pipelines (Jenkins/Azure DevOps), npm, Webpack

Practices: Clean Code, SOLID Principles, Responsive Design, Cross-Browser Compatibility, Code Reviews, Agile/Scrum

Integrations: RESTful APIs, Western Union API, Ventaja API, Dynamsoft SDK

WORK EXPERIENCE

Senior Software Engineer (Front End), Techlogix

FEB 2022 – JAN 2025

Project: International Money Exchange (Dubai)

- Architected and delivered the end-to-end **Customer Onboarding (CO) module**, converting manual intake into a dynamic, API-driven flow with MOL Code verification and automated KYC, resulting in **100% digitization** of customer registrations and zero invalid onboarding entries.
- Engineered the comprehensive **Accounts Payable (AP) lifecycle**, managing the full technical journey from Inventory & Requisition to Quotation, Order Placement, and Final Payment, resulting in a unified procurement system with 100% auditability.
- Architected and maintained a **universal Angular component library** (Headers, Action Buttons, Financial Grids) following **Clean Code and SOLID principles**, standardizing UI/UX patterns across the UAE and Qatar platforms and accelerating development velocity by **25%**.
- Provided **technical mentorship** to junior and mid-level developers, conducting structured **code reviews** to enforce coding standards, improve type safety, and promote reusable design patterns.

Project: International Money Exchange (Qatar)

- Executed a multi-version **strategic migration from Angular 6 to Angular 15**, transitioning from View Engine to Ivy and adopting pipeable RxJS operators, resulting in a **40% reduction in build times** and full alignment with modern Node.js security standards.
- Integrated **Dynamsoft SDK** for hardware-direct document scanning, eliminating manual file-upload intermediaries and achieving **100% digitization** of physical KYC documents with significantly reduced onboarding latency.
- Integrated **Western Union and Ventaja RESTful APIs** into core remittance screens, unifying disbursement workflows and eliminating the need for external service portals to deliver a seamless agent experience.
- Engineered the core **Refund and Amendment engine** for the Send Remittance module, implementing a complex **state-management architecture** for transaction reversals and modifications, resulting in **100% data accuracy** in the financial audit trail.
- Architected the **AFX Customer Service Module** from the ground up with automated Fax/Email templates, streamlining dispute resolution and improving response times for transaction queries.
- Championed **performance optimization** and **security best practices**, including lazy loading, AOT compilation, and strict Content Security Policy enforcement across all modules.

Software Engineer (Front End), Techlogix

MAR 2019 – FEB 2022

Project: International Money Exchange (Qatar)

- Migrated all system fonts and icons from external CDNs to local storage assets, achieving total independence from external network latency and delivering a **faster First Contentful Paint (FCP)** with stable performance in firewalled banking environments.
- Centralized financial calculation logic into **reusable Angular services**, synchronizing currency and gold weight conversions across all modules and eliminating rounding discrepancies.
- Overhauled grid pagination and rendering logic using **Angular Material** data tables, standardizing data views for **2,000+ records** and resolving memory-related crashes during batch searches.
- Standardized column headers and action buttons per business rules, ensuring **responsive design** and **cross-browser compatibility**, reducing end-user training time and delivering a polished, professional UI.

- Authored **unit and integration tests** using Jasmine and Karma to validate financial calculation services and component rendering, improving regression coverage across critical modules.

EDUCATION

Bachelor of Science, Computer Science — Institute of Business Administration (IBA)

JAN 2015 – DEC 2019

- Relevant Coursework: Object Oriented Programming, Data Structures, Databases, Web Development
